

Case Studies in Maintenance and Reliability: A Wealth of Best Practices

This unique and practical book describes 42 real-life events and/or situations in the careers of the three authors from which they gained insights into the applicable best practices in maintenance and reliability. The authors explain the underlying philosophies where relevant, drawing on the teachings of the leading thinkers in leadership and management. Designed to share knowledge and experience with the readers, in a readily accessible fashion, this resource does not tell the readers what to do or how to do it; it merely explains the event or situation the authors faced, and how they dealt with it. Readers can choose whether they wish to adopt or adapt the authors examples. These stories are dynamic illustrations of real life situations which readers will recognize in their own work situations. With a vast potential for improvements in reliability and maintenance performance in industry, these well proven approaches and best practices are sure to help stimulate improved performance on all fronts--safety and environmental, production, maintenance costs, and reputation! Provides a logical organization with chapters grouped into six broad headings, enabling readers to choose the order in which they wish to absorb the lessons, which are based on the Shewhart-Deming Continuous Improvement cycle. In addition to the Plan-Schedule-Execute-Analyze elements, the authors have added Leadership and People to complete the suite. Each chapter has broadly similar sections, beginning with a Background to the events, going on to describe the key elements of the approach, and ending with Lessons and Principles. Underlying theories, philosophies or even detailed descriptions of methods are stripped out of the main chapters and described in Appendices, so that only those readers who wish to delve into details may do so. Contains a Book Summary which draws all the principles

and lessons together, and gives references to the relevant chapters. Copiously illustrated, with charts, diagrams and tables which relate closely to the text.
