

Microsoft .NET Framework Security (One Off)

Today, computing is dynamic and global. It is no longer practical to input or access data from a single computer. Microsoft .NET Framework allows you to use the same data for various digital devices. However, accessibility can lead to breaches in security. Therefore, this platform also provides several mechanisms for administrators and application developers to protect resources and code from unauthorized users. Microsoft .NET Framework Security gives you the knowledge to keep your network and code safe and gain the competitive edge!
