

Emerging Threats for the Healthcare Industry: The BYOD Revolution

What are the security dangers of the new BYOD (Bring Your Own Device) culture? How can we protect our company data as employees increasingly use their own devices to connect to the corporate network, to copy and process information? This white paper was written with the healthcare industry in mind, but it can be applied to any industry and to companies and organizations of any size. A starting guide with some helpful hints if you are just beginning to prepare a BYOD policy for your organization or if you simply want to understand what are the challenges and the opportunities for introducing a BYOD culture in your company.
