

Future Multimedia Networking: Third International Workshop, FMN 2010, Krakow, Poland, June 17-18, 2010. Proceedings (Lecture Notes in Computer Science ... Networks and Telecommunications)

It is our great pleasure to welcome you to the Third International Workshop on Future Multimedia Networking (FMN). Following previous successful workshops (held in Cardiff, Wales in 2008, and in Coimbra, Portugal in 2009), this year's workshop continued the tradition of being a premier forum that gives researchers and practitioners a unique opportunity to share their experiences and discuss state-of-the-art research results and major recent accomplishments in the area of multimedia networking. In recent years, real-time multimedia services have contributed extensively to our life experience. There is no doubt that multimedia traffic and services will continue to grow and will be significant contributors to Internet traffic in the future. The management of content distribution services and the efficient delivery of real-time multimedia services over diverse and heterogeneous wired/wireless systems remain a significant challenge for multimedia system designers and developers. This year's workshop focused on various aspects of multimedia systems including content networking, quality of experience/quality of service, and video distribution. The call for papers attracted many outstanding submissions from all over the world for the main workshop. After a rigorous peer review of the submitted papers, the Program Committee accepted 36% of the submissions that cover a range of topics, including quality of service (QoS) and quality of experience (QoE) management in content-centric networks, video distribution, and video quality assessment in future multimedia networking environments. This year we also had a Demonstration Session on Future Multimedia Networking for which seven papers were accepted. It is our sincere hope that the proceedings of this workshop will serve as a valuable reference for multimedia researchers, designers, and

developers. Putting together FMN 2010 was a team effort.
