

Mobile Disposition: Delivering Enterprise Technology Capabilities at Digital Age Velocity

Mobile Disposition is a quality of being that brings power to excel in the Digital Age to every enterprise architect and other technology professionals. Overcome the chronic breakdowns and growing challenges of enterprise systems development: rapidly shifting business strategy met with a sedentary disposition that encumbers the mobility required to cope in times of high innovation and fast-paced marketplace change. Mobile Disposition abandons agility operating within old structures and adopt a forward-moving mood for cultivating your marginal value delivering solutions to the business at Digital Age velocity. This book is not only for enterprise architects as it is not technical in nature. CIOs, CTOs and business analysts also acknowledge new and growing demand for rapid coordination and cooperation between business and technology. Ernest Stambouly distills an entire career in enterprise product development and technology innovation into a simple ontology for getting mobile in enterprise application development. Cater technology-empowered solutions developed from the stance, role, viewpoint, view, interest and actions professionals take in daily work. This enables a new economic frontier where technology is embraced as the strong arm of business. Seek meaning first in every situation to yield designs for professional practices, instead of flow of paper, inputs and outputs. This simplifies the way by which we relate to technology. Focus on the human factor and aim capabilities at user situations to successfully align technology with business concerns. Mobile Disposition is how you bring to the forefront of daily technical work a new kind of leadership rooted in building strong relationships and fluid cooperation. It is your access to excellence and higher earnings for the sake of fulfilling lifetime ambitions and business missions.
