

## Sport Psychology: Concepts and Applications

Beginning with a discussion of the issues in sports performance and behavior, it relates established concepts and processes from general psychology to important aspects of sports performance such as motivation, motor-learning and aggression. The application of these concepts is supported by examples and empirical evidence from the context of sport psychology itself. Makes a significant contribution to the continuing development of the field of sport psychology and further presents information of direct, practical use in coaching and monitoring sports performance.
